Plants in the Landscape

by Philip L. Carpenter, Theodore D. Walker, and Frederick O. Lanphear, Purdue University

Plants in the Landscape is a unique introduction to the principles and practices of ornamental horticulture in landscape architecture. No other single volume covers such a broad range of topics. Here is a wealth of information on subjects ranging from the landscaping practices of ancient civilizations to no-nonsense, dollars-and-cents descriptions of the present-day landscaping industry. The focus throughout is on landscape plants: how to select and maintain them for healthy growth in a wide range of settings.

Plants in the Landscape is a beautiful book. The text is closely integrated with more than 500 illustrations (including more than 300 photographs). This is a fine sourcebook for the professional and amateur alike, as well as an unparalleled text for courses in ornamental horticulture, landscape architecture, and landscape design.
